Unit 3: Transition and Change

**Rationale**

Transition and change involve the alteration of circumstances over short or long periods of time. These processes can be brought about in varying degrees by physical, social, emotional, environmental, political, economic or technological influences. Individuals, groups, societies and governments can choose to reject, modify or adapt to new circumstances resulting from transition and change. Students need to understand that while change is a constant condition of human society, it occurs in different ways and at different times. An understanding of the past and the processes of change help students to explain the present and to explore possible futures.

**Unit objectives**

**Knowledge**

- Time and chronology
- The nature of past societies and periods of time
- The nature of the relationship between PNG and the rest of the world
- Significant developments in PNG’s political, social, economic and cultural history
- Changing rights and freedoms of various gender, cultural, social, cultural, economic and political groups
- The processes and implications of technological change

**Skills**

- Using historical terms and concepts in appropriate contexts
- Interpreting, critically analysing and using historical sources and evidence
- Recognising perspectives and interpretations about individuals, groups, issues and events
- Exploring causal links to reconstruct the past
- Conducting social investigations

**Values/attitudes**

- Respect for reasoning and truth
- Concern for the welfare, dignity and rights of all people
- A commitment to a justice, equality and freedom
- Acceptance of diversity
- Respect for different viewpoints and belief systems
- A commitment to lifelong learning
Access and equity

In order to provide for access, participation and equity within the curriculum we need to identify those areas which exclude many females and some males. Students not only require access to learning opportunities but need to be actively involved in them, and this is more likely to be achieved when the subject matter is relevant, interesting and includes the experiences of women and girls.

To provide for access, participation and equity, the curriculum needs to contain:

- Content which has women's and girls' experiences and achievements centrally placed as opposed to being omitted or undervalued
- Contexts that value girls, including the classroom management of harassment and the equitable use of time, money, personnel and all resources
- Cooperative and collaborative teaching and learning styles which consider the need for both single-sex and mixed-sex groupings in the classroom
- Inclusive language
- A supportive learning environment
- Acknowledgement of both the diversity and similarity of female and male experiences

It is important that you use inclusive strategies in your classroom. Groups should contain a mix of males and females. Girls should be encouraged to contribute in class discussions and to take leadership roles. Care should be taken that students with special needs are not disadvantaged by any activity and that resources are distributed evenly.

Often history is only recorded from a male perspective, with stories of male achievement in war, exploration, government and development. The role of women is ignored or forgotten. This unit provides an opportunity to examine gender roles in class discussions and research activities in each of the sections. It is important also that participants selected for interviews, surveys and as guest speakers are both male and female so that students are aware of different perspectives.
Programming Unit 3 - Selecting modules and topics

Before commencing the study of the unit or modules within the unit, it is recommended that you consider:

- Conducting a class survey to ascertain students background knowledge and experience
- Compiling a list of possible topics (based on your expertise and college resources)
- Allowing the students to select those topics in which they are interested. This will maximise student interest and participation

The main purpose of programming is to help you arrange the presentation of the Unit in an orderly manner. You will need to examine all the available modules for the Uni in order to make appropriate choices for study for the trimester/semester. It is recommended that you make plans with other lecturers teaching the same Unit.

This guide contains content, strategies and activities for four core and one optional module. To do your trimester/semester plan you need to:

- Select content from each of the core modules (and the optional module if you wish)
- Write down the number of weeks in the trimester/semester
- Write down the number of lectures/tutorials for each week
- Write down the content to be taught in each lecture/tutorial (page references)
- Select activities from the modules to match the content you have chosen. (When selecting activities be realistic about how much time you have and how long the activity might take to complete.)
- Select two/three assessment tasks that overlap across the modules to enable students to demonstrate skills that are applicable in more than one situation

Because you are responsible for the development of beginning teachers, it is better that contact time is spent on the development of skills through whole class, group, paired or individual activities. Students should be given course material in advance and should be encouraged to read content before lectures/tutorials so that contact time is not wasted on reading/comprehension tasks.

Following are examples of three different program types – a sequential content-based program, an integrated skills-based program and a thematic program.

ℹ️ It will not be possible to complete an activity every session, but you should try to do one activity each week. Make sure the activities are varied, that is, not all discussion or group presentations. There are plenty of choices in the modules.
A sample program: sequential, content-based
(12 weeks with 2 x 1 hour/lectures/tutorials per week)

Note 1: Students are expected to read relevant sections prior to lecture/tutorial
Note 2: The first 10 minutes of each session will be spent on overview or clarification of home reading topics
Note 3: MODULE 3.1 ‘SKILLS’ IS INTEGRATED INTO THE THEMES AS SELECTED ACTIVITIES ARE BASED ON KEY SKILLS
Assessing Unit 3

Assessment is the process of identifying, gathering and interpreting information about student learning. The main purpose of assessment is to improve student learning and the quality of the learning programs. A variety of assessment strategies should be used and students should be given opportunities, in varying contexts, to demonstrate in an authentic manner what they know, understand and can do.

Assessment strategies should be sensitive to gender, disability, culture, background language and geographical location.

A single task can often measure achievement in relation to several objectives. Consider the nature and structure of the task so that:

- The requirements of the task are as clear as possible
- Questions or activities are chosen that are relevant to the objectives and allow students to demonstrate appropriate outcomes
- Any sources or stimulus material used are clear and appropriate to the task
- The likely range of student responses are anticipated
- There is a balanced selection of skills and knowledge objectives being assessed
- Marks or grades reflect the relative importance of each part of the task
- Instructions are unambiguous
- The language level is appropriate
- Items are not too difficult or too easy
- It does not contain bias
- The marking scheme is applied consistently

The focus in choosing assessment strategies should be the application and practice of skills. It is unlikely that there would be one task for each module, rather students/lecturers would choose from tasks across the whole unit to fulfill college requirements for number and weighting of assessment tasks. If there is a choice, all tasks should be equivalent in difficulty, weighting and time required for completion.

General assessment strategies include:

- Inquiry-based research assignments and projects
- Oral presentations e.g., seminars, debates, tutorials
- Essays – with a focus on inquiry, analysis and/or reflection
- Performance activities e.g., role play, dramatic presentations, simulations
- Short answers or paragraphs
- Case studies
- Practical exercises eg mapping
- Field work
- Teacher observations
• Conferencing e.g., discussions/interviews between teacher and student
• Reflective journals
• Testing e.g., topic tests, examinations
• Developing resources e.g., class story books
• Lesson plans
• Peer assessment
• Self assessment and evaluation

Suggested assessment tasks
These tasks show some assessment possibilities. Each task assesses more than one objective. Assessment tasks for the unit should cover skills and content from across the modules
• Essay eg impact of European settlers
• Diary entries eg as an explorer or village leader at the time of first contact
• Map eg exploration in the highlands
• Report on World War 11 relics
• Essay e.g., impact of European settlers
• Personal research e.g., powerful people in your local community
• Seminar e.g., development of plantation industry
• Survey e.g., effective control techniques
• Case studies e.g., abuses of power
• Map of world conflict zones
• Comparison chart e.g., major conflicts and their causes/effects
• Project e.g., secession movements in PNG
• Write an essay on the role played by Papua New Guinean soldiers in world conflicts
• Research the use of computers in your college and problems associated with their use
• Design a chart illustrating traditional and modern technology in a particular context eg sea transport
• Research project eg burial rituals from around the world
• Poster eg artefacts of PNG
• Explanatory report eg digging up the past
Teaching Unit 3

The main emphasis in the teaching of each module/topic is to include a range of strategies and activities and to develop skills which will be useful for beginning teachers in their own classrooms.

Teaching sequence

<table>
<thead>
<tr>
<th>Introductory session</th>
<th>At the beginning of each module or topic, establish student’s prior knowledge and understanding by asking questions, brainstorming, and clarifying the meaning of important terms. Refer to module glossaries if available. (Student responses will help you decide how much time needs to be spent on basic content and how quickly you can proceed to skills development and activities)</th>
</tr>
</thead>
<tbody>
<tr>
<td>During the topic/module</td>
<td>• When setting group work make sure each group has the necessary equipment/resources and set a firm time limit. Do not set the same task for each group and avoid boredom by using different strategies for group presentations eg classroom display, question and answer session, summarising focus areas. • To cover the content in the limited time available students should be encouraged to read material for homework. This will enable more class time for discussion and activities. • Only selected examples of maps, diagrams, illustrations and descriptions have been included in the modules. Students should be encouraged to consult textbooks and library materials for more detailed examples and explanations. • Remember – you are preparing students to teach in primary classrooms. Make students aware of the links between topics being studied and the primary curriculum. When setting activities or assessment tasks, discuss with students how their actions/findings will be useful for them in their own classrooms later.</td>
</tr>
<tr>
<td>Conclusion</td>
<td>At the end of a module or topic ask students to summarise the skills/knowledge learnt in this module. Encourage students to see how generic skills can be used in future Social Science modules, in modules for other subjects, and in their own teaching.</td>
</tr>
</tbody>
</table>

Teaching strategies

A comprehensive range of teaching strategies is presented in the following table. Suggested strategies and activities are also included with each module.

<table>
<thead>
<tr>
<th>Strategy</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Analysing values</td>
<td>the gathering, analysing, organization and appraisal of facts in order to understand value positions held by individuals, groups and organizations.</td>
</tr>
<tr>
<td>Brainstorming</td>
<td>recording all the information already known on a topic to generate new ideas or stimulate creative thinking</td>
</tr>
<tr>
<td>Clarifying values</td>
<td>reflective and sharing process used to explore validity of</td>
</tr>
<tr>
<td>Strategy</td>
<td>Explanation</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Classroom displays</td>
<td>provides a way of focusing on the current unit which provides a record of learning as well as encouraging students to respond to learning</td>
</tr>
<tr>
<td>Conflict resolution</td>
<td>analysing conflict situations in an objective and systematic way and being able to suggest a range of non-violent solutions</td>
</tr>
<tr>
<td>Consequence charts</td>
<td>enable the exploration of cause and effect relationships, alternatives consequences or likely consequences of alternative actions or decisions</td>
</tr>
<tr>
<td>Cultural activities</td>
<td>exposing students to a variety of activities that give them insight into their own culture or that of others</td>
</tr>
<tr>
<td>Current affairs</td>
<td>a valuable source for discussion and inquiry</td>
</tr>
<tr>
<td>Debates</td>
<td>formalised discussions in which opposing points of view are advanced. These allow students to take a position on an issues and justify that position, perceive other points of view and analyse relative strengths of arguments</td>
</tr>
<tr>
<td>Decision-making</td>
<td>the process of choosing from two or more alternatives</td>
</tr>
<tr>
<td>Diagrams</td>
<td>a visual text that provides a symbolic representation of the interrelationship of concepts or elements of a social or physical structure</td>
</tr>
<tr>
<td>Discussions</td>
<td>opportunities to express ideas and feelings and listen to others, to look at issues from other perspectives</td>
</tr>
<tr>
<td>Evaluating values</td>
<td>weighing options, consequences and evidence in decision-making contexts in order to make decisions and take actions in just, effective ways</td>
</tr>
<tr>
<td>Excursions</td>
<td>journey to a place to provide opportunities to respond to or interact with new environments or experience different activities</td>
</tr>
<tr>
<td>Family trees</td>
<td>diagrammatic representation of relationships which can depict change and the passing of time</td>
</tr>
<tr>
<td>Flow charts</td>
<td>visual text that provides a symbolic method of explaining and recording a chain of events in a sequence. They also examine processes and stages within a structure</td>
</tr>
<tr>
<td>Graphs</td>
<td>diagrammatic method of displaying the relationship between facts</td>
</tr>
<tr>
<td>Group work</td>
<td>encourages students to participate in achieving a shared goal. Allows students to interact with each other and to value each member’s contribution</td>
</tr>
<tr>
<td>Guest speaker or visitor</td>
<td>a person who shares his/her knowledge and skills with the students</td>
</tr>
<tr>
<td>Interviews</td>
<td>a method of gaining information about people, their attitudes and lifestyles. Can be part of a survey or open-ended</td>
</tr>
<tr>
<td>Jigsaw groups</td>
<td>analysing and breaking down topics into discrete research tasks or activities undertaken by different groups, then reported to the whole class gradually building up a detailed and complete ‘picture’ of the topic</td>
</tr>
<tr>
<td>Learning games</td>
<td>devices which involve students in simulated experiences to develop concepts and understandings, record information or demonstrate knowledge. These can be made by teachers or students</td>
</tr>
</tbody>
</table>
## Strategy | Explanation
--- | ---
Mapping | constructing, reading or interpreting symbolic representations of the Earth’s surface
Matrix | a concise classification of numbers, words or symbols assembled in a grid layout to facilitate analysis and predictions
Mind maps/concept maps | used for drawing connections between ideas and concepts. Often associated with brainstorming
Models | demonstration of a concept in concrete form eg items made from play dough, relief maps, mobiles, murals, dioramas
Moral dilemmas | a real or imaginary situation depicting an apparent conflict between two or more courses of right action, discussed in a supportive atmosphere. Dilemmas may be set in past, present or future contexts
Oral history | students listen and gather information as an individual recounts life experiences or describes events
Photographs | visual texts which can be used to develop skills such as observing, classifying, grouping, comparing and contrasting. Photographs also allow reinvestigation of first-hand experiences at a later date
Pictures | visual texts which enhance understanding of written and spoken texts as well as being used to acquire information etc
Presentations | sharing of information obtained through individual and group research or study. These can be spoken, written or multimedia and provide experience in organising, planning and presenting information and material to a particular audience
Problem-solving | finding answers to questions and difficulties which arise in many and varied contexts
Questioning | involves students in asking questions and responding to them. Questions can be used for developing thinking and learning, stimulating and directing inquiry, assessing student learning.
Role-play | taking on and acting out roles of real or imaginary individuals in varied, non-threatening simulated situations in order to clarify values and develop empathy with other people
Simulation | assuming roles according to specified rules and procedures. These can be role plays or games
Surveys | method of gathering information for a specific purpose eg data collection, questionnaire, interview
Task cards | defined activities or pieces of research presented in written form to individual students or groups. They are a method of directing student learning
Texts | using a range of texts to expand and develop student knowledge and understandings
Timelines | lists of events set out diagrammatically in chronological order
Using artefacts | by examining objects made by humans, students are able to gain an insight into the technology and lifestyles of people from particular cultural groups or times

## Site studies
Site studies enable students to understand their historical environment and the nature of historical enquiry. They offer a means to interpret various aspects of the past, recognise how occupation has changed over time and gain an understanding about the context in which the
changes occurred. As well, they provide an enjoyable and innovative means to understand citizenship and how this too, has changed with time.

Site studies should be embedded within the course as a means through which students acquire knowledge and skills. They can be used to lead into the study of focus issues, topics or areas of study, or as a means to highlight or emphasise them.

Current events

The study of current affairs and special events adds relevance, reality and immediacy to the Social Science program. Meaningful bridges can be built between life in and out of college and between the past and present. Student’s interests can be extended and deepened as they investigate events and issues related to their own concerns, to long-term social trends, and to actions of individuals and groups.

Events which are part of the news, provide a valuable source for discussion and inquiry.

It is recommended that module content be reinforced through discussion of relevant current events. Events should be selected by students who should be encouraged not only to describe the event but also to explain why it was selected.

Ⅰ Newspaper articles used in this unit were current at the time of writing. It is important that students be aware of the need to be up-to-date with resources they use in schools. Model this awareness by substituting similar, more recent articles each time you teach this or other Social Science units.
Resources

Newspapers – articles, reports, graphs and statistics, cartoons
Atlases and maps
The local area – college grounds, nearby landform features
Professional journals
Documentaries and television programs
Videos
Magazines
CD-ROMS
The Internet
Databases
Government departments
Non-government agencies
The local community – families, workers, artists, businesses, industries
Colleagues
Business and companies eg mining, oil palm, sugar, construction

Books

This is by no means a comprehensive list. Lecturers are encouraged to seek out other appropriate titles, especially those written since 1990.

Air Niugini – Paradise collections and various in-flight magazines
NDOE (1999). *Papua New Guinea’s Origins*
